Profile

Full-stack TypeScript developer shipping production web apps with Next.js, NestJS, and PostgreSQL. Built and shipped a multi-tenant SaaS (TeamBoard) with Stripe billing, a real-time chat platform (PulseChat) with hardened auth and Redis pub/sub, and a live real estate platform (yenigunemlak.com 🌐) serving 240+ active property listings. Working remotely from UTC+3 with 4 to 6 hours of overlap with CET/EST; available as B2B contractor.

Education

09/2020 – 09/2024
Konya

Computer Engineering
Necmettin Erbakan University

Professional Experience

04/2025 – Present
Kocaeli

Full-Stack Developer
Alutem

- Developed and shipped a full-stack admin panel using Next.js 16, TypeScript, Supabase, and Material UI, used daily to run operations for a metal products company.
- Established role-based access control with 3 permission levels, Row Level Security across all database tables, IP-based route protection, server-side session validation, and a product revision audit log tracking every change.
- Built a real-time analytics dashboard integrating live metal price data, interactive charts (Line, Bar, Pie, Gauge), and date range filtering using MUI X-Charts.
- Engineered a complete product catalog system supporting category hierarchies, variant filtering, media uploads (images & PDFs), and full CRUD operations. Launched on Vercel with automated CI pipeline.
- Built and operate a supplier-feed synchronization engine (Node.js, Supabase, Railway) keeping prices and stock in sync with the company's e-commerce platform: locale-aware price parsing that fails loudly on malformed data, a feed-coverage guard preventing mass product deactivation from truncated feeds, and partial-failure runs with per-product change reports.
- Cut sync latency ~70% by migrating the worker to an EU region closer to the e-commerce provider's API.

01/2026 – 03/2026
Remote

Contract Frontend Developer (yenigunemlak.com)
Eupholias

- Inherited a Next.js real estate platform mid-development and became its primary frontend developer, reworking most of the UI surface; live at yenigunemlak.com 🌐 with 240+ active listings (Next.js 16, TypeScript, Tailwind, Zustand).
- Designed and implemented the advanced search system: multi-level category/location/price/feature filters with type-safe URL state serialization, making every filter combination shareable and SEO-crawlable.
- Built the listing detail experience: SSR pages with dynamic Open Graph metadata per listing, photo/video galleries, and map integration (Google Maps + Leaflet).
- Implemented the admin panel UI across 15+ modules (listing CRUD, customers, contracts, statistics, SMS panel) against a REST backend.

Projects

- 01/2026 – 04/2026

TeamBoard 

Multi-tenant SaaS for team collaboration with Stripe billing · github.com/MuratZrl/teamboard · [teamboard-web.vercel.app](#)

- Built a multi-tenant SaaS with kanban boards, Stripe subscription billing (Free/Pro), Google OAuth, and email invitations via Resend.
 - Designed three-layer authorization: workspace membership → role-based access (Owner/Admin/Member) → cross-tenant resource resolver guarding 7+ resource types.
 - Implemented drag-and-drop kanban (@dnd-kit), event-driven activity feed, and notification system using NestJS EventEmitter.
 - Shipped 12 Playwright E2E tests against real Postgres in a 3-job GitHub Actions CI pipeline (lint+build, API typecheck, E2E).
 - Stack: Next.js 16, NestJS 11, Prisma, PostgreSQL, Stripe.
- 01/2026 – 05/2026

PulseChat 

Slack-style real-time chat with WebSockets and Redis pub/sub · github.com/MuratZrl/pulsechat

- Built a production-grade chat platform with multi-room channels, DMs, file attachments, and 10+ real-time features (typing, read receipts, reactions, mentions, pins).
 - Hardened auth across 22 PRs: refresh token rotation with reuse detection, per-event WebSocket authorization, magic-byte file validation, dual-layer rate limiting (HTTP + WS).
 - Engineered Redis pub/sub adapter for multi-instance Socket.io broadcasts; shipped 144 unit and end-to-end tests.
 - Stack: Next.js 16, NestJS 11, Prisma, PostgreSQL, Redis, Docker Compose.

Skills

Languages & Frameworks TypeScript, JavaScript, React 19, Next.js 16, NestJS 11, Node.js	Frontend Tailwind CSS, Material UI, Zustand, TanStack React Query
Database & ORM PostgreSQL, Prisma, Supabase (RLS), Redis	Tools & Infrastructure Docker, Git, GitHub Actions, Socket.io, Redis pub/sub, REST API, JWT, OAuth (Google), Stripe Webhooks
Testing Jest, Playwright (E2E)
